

CLASH 836 table

design Samuli Naamanka

Clash 836 is light wooden table, which can be enlarged to fit the measurements of a large conference table. 40 mm thick table top enables the table to be built without support frame. This way there is more space for seating under the table. The edges of the table top have been lightened. The table top is available in solid wood and (Clash 837) veneer or laminate coating with distinguishable veneer edge. The legs are solid wood. The table is also obtainable as round and in different heights. A hatch for electricity comes as an accessory.
